Nu-Mega Introduces Gelporm[®], a Novel DHA omega-3 Emulsion Suitable for UHT Beverages

Nu-Mega Ingredients, a global supplier of best-in-class microencapsulated DHA/EPA/ARA powders, has once again innovated a first-to-market omega-3 format. Gelporm[®] double-emulsion technology is designed for DHA fortification of full-fat UHT beverages including milk products, shakes and plant-based drinks.

Gelporm solves for several production challenges, including dispersion, foaming, and thermal stability. Nu-Mega's unique formulation delivers superior sensory results and ensures product stability, as it withstands typical homogenisation pressures and temperatures. Gelporm is made with vegan DHA algal oil, plus Kosher and Halal certified, increasing consumer accessibility.

Gelporm is distributed by Barentz, the exclusive North American distribution partner for all Nu-Mega products. "By combining our pioneering expertise in microencapsulated DHA, EPA, and ARA with Barentz' extensive market presence and local insights, we are set to accelerate business development and deliver innovation in the region." says Bassam Hallak, Global Director of Sales & Marketing, Nu-Mega Ingredients

"Gelporm is an example of Barentz bringing cutting edge and on-trend ingredients forward, to help food and beverage customers solve their formulation and fortification challenges." said Andrea Carlson, President of Human Nutrition, Barentz North America.

Food Ingredients Europe recognized Gelporm as a 2025 Health Innovation Award finalist.
